6m³ & 9m³ Storage Tanks

GENERAL DETAILS

Shay Murtagh has been producing concrete tanks in Ireland for over 25 years. This precast tank uses 50N/mm² to provide a durable and economical solution to all liquid storage requirements. This tank is produced under Shay Murtagh's quality control policy and each tank is tested for water-tightness before leaving the factory.

These tanks are generally available ex-stock and come complete with a 150mm thick lid. This lid incorporates a 600x600mm opening for a manhole.

Openings:

These tanks come complete with a 100mm PVC collar in the wall. For further pipe connections, the wall of the tank can be drilled using a series of 8mm holes and tapping out the centre.

Installation instructions:

Excavations should be 400mm larger than dimensions shown. The floor of the excavation should be level with no protruding rocks, and a minimum of 50mm sand bed, levelled and compacted for tank placement. There should be a clear offloading site within 4 metres from the rear of the truck to the centre of the tank.

Please call for further information on this product.
